

Below is information on State-by-State public high school graduation rates for the four years ending in 2007. The information comes from the U.S. Department of Education, National Center for Education Statistics and is based on an averaged freshman graduation rate (AFGR).

AFGR is an estimate of the percentage of public high school students who graduate with a regular diploma four years after starting 9th grade. Other high school completers awarded alternate credentials such as a certificate of completion or GED are not included in AFGR calculations.

AFGR uses aggregate student enrollment data to estimate the size of an incoming freshman class and aggregate counts of the number of diplomas awarded 4 years later. The United States' public school student AFGR for the class of 2008–09 was 75.5%.

The below chart seems to indicate that many low-income limited English proficient (LEP) Hispanics do better if they do not concentrate together. A child in a low income family has a better chance of staying in school if the family does not live surrounded by other LEP low income people speaking the same language. For example, Missouri, which has relatively few Hispanics, has a 2007 Hispanic four-year graduation rate that is 20% higher than white, non-Hispanics. Vermont is another extreme case. That State appears to have had a 100% Hispanic four-year graduation rate in 2007.

But no finding is conclusive. Please also remember that these figures do not evaluate the quality of the education provided in each State and that the information is complicated. For example, although there's only a .5% graduation rate difference between Hispanics and non-Hispanic whites in Mississippi, both sets of numbers are low. Florida is another example of that pattern.

2007 4-yr HS Graduation Rate		American Indian/ Alaska Native		Asian/Pacific Islander		Hispanic		Black, non-Hispanic		White, non-Hispanic		DIF Hispanic & White, non-Hisp
		29,724	61.3	138,589	91.4	376,396	62.3	374,075	60.3	1,723,915	80.3
